BMI Calculator Project

Categories

Programmed BMI Categories

The project contains four BMI categories. These are the thresholds explicitly programmed into the Python code.

Underweight

BMI below 18.5

Normal Weight

BMI from 18.5 up to, but not including, 25

Overweight

BMI from 25 up to, but not including, 30

Obese

BMI of 30 or above

Programmed Age Groups

The project also contains four age-group categories based on the conditions in **show_result()**.

Child

Age below 13

Teenager

Age from 13 up to, but not including, 20

Adult

Age from 20 up to, but not including, 60

Senior

Age 60 or above

Important Project Note

These categories describe the decision rules implemented in the submitted Python program. They are included here to document the program logic. BMI interpretation can depend on age and other factors, so the displayed categories should not be treated as a complete medical assessment.
